

Y3: 'Predator!' Project Knowledge Organiser

Predator- an animal that hunts, kills and eats other animals

Apex predator- top of food chain and not hunted by other animals

Prey- animals that predators hunt for food

Decomposer- (bacteria, fungi, insects) eats dead plants and animals

Producer- (plants) organism that creates its own food

Consumer- animals that eat other plants or animals

↑ - energy transferred through a food chain

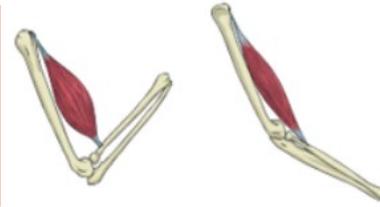

Carnivore

Omnivore

Herbivore

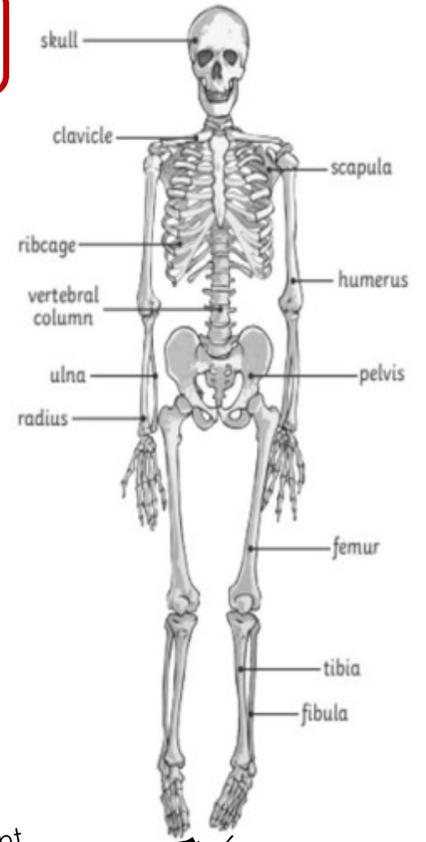

contract

relax

Muscles work in pairs to move joints

Contracting (get shorter) and relaxing (get longer)

Endoskeleton- inside skeleton

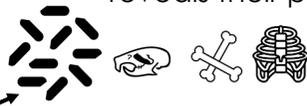

Exoskeleton- skeleton is on the outside

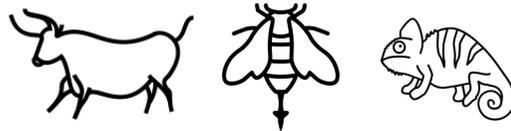

Hydrostatic skeleton- fluid-based skeleton

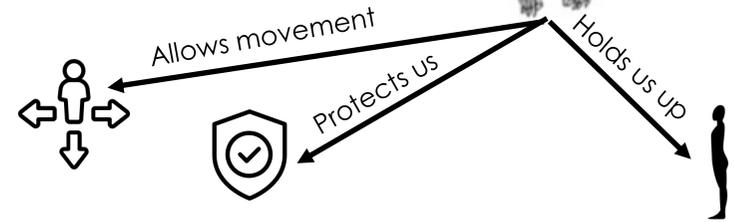

Dissecting owl pellets reveals their prey

Prey have adapted to have defences such as horns, stings, venom and camouflage

Predators have adapted to hunting experts with fast, strong legs, sharp teeth and jaws and strong talons

Vertebrate- animals with backbones

Invertebrate- animals without backbones

Muscles- a band of tissue in an animal's body that helps body parts to move or stay still

Tendons- cords that join muscles to bones

Joints- areas where two or more bones are fitted together
